Founded in 1967 as a „university under one roof“, Ulm University places great importance on interdisciplinary learning and future-oriented education.

The unique combination of the subject areas mathematics, business and economics in one faculty led to the development of the program in Wirtschaftsmathematik which combines all three fields and basics in computer science; it was the first of its kind in Germany when it was launched (1977).

The program in Wirtschaftswissenschaften (1999) joins both, business and economics, with a strong basis in mathematics and computer science. The concept of this program is characterized by multidisciplinarity, individuality, internationality and interesting additional qualifications. The degree program includes lessons in the subjects of business and economics, as well as in the neighboring disciplines mathematics, computer science, business law and business English.

In addition, key skills such as other foreign languages, rhetoric courses and ethics seminars are offered. In the upper years of the bachelor’s degree and master’s degree the university offers an individual choice of vocational or research-oriented courses. The English-taught Master program in Finance (2003) attracts students from around the world. Furthermore, the faculty offers supplementary qualifications in actuarial sciences and auditing.

Teaching language in the Bachelor programs is mainly German. Therefore the exchange students should have sufficient command of German to follow the course. Minimum level B1. The International Office organizes intensive German language courses prior to the start of each semester (September / October and March / April) in addition to German courses during the semester. Participation in these courses is open to all ERASMUS/EXCHANGE students free of charge.

Mainly in the upper years of the bachelor’s degree as well as in the master programs we offer a wide range of lectures taught in English in the fields of

**Economics**
