2. November 2016

Einladung zum Vortrag

von

Prof. Dr. Vladimir Spokoiny
WIAS and Humboldt University Berlin

Clustering using adaptive weights

The talk discusses a new method of unsupervised learning for high dimensional data based on the idea of adaptive weights from Polzehl and Spokoiny (2000). The procedure recovers the unknown clustering structure without any prior information about the number of clusters, their size, distance between clusters, etc. The approach extends the popular k-mean and density based clustering procedures by using dynamically updated local weights. Theoretical results describe two major features of the method: propagation within a homogeneous region and separation between two different regions. Numerical results show state-of-art performance of the new procedure.

Termin: Freitag, 18. November 2016, 14:30 Uhr

Ort: Universität Ulm, Helmholtzstr. 18, Raum 220

Interessenten sind herzlich eingeladen.
Der Vortrag findet im Rahmen des Mathematischen Kolloquiums statt.
