

Extension of the Monero Wallet

The goal of this project is to extend the Monero project¹ to support an additional transaction type. The transaction itself is already implemented, but is not integrated into the cli tools and the consensus mechanism.

A good knowledge of C++ is required and a basic understanding of cryptocurrencies is helpful. The evaluation of the project consists of creating a cli demo in a test setup.

 Bachelor's Thesis	12 CP
 Project	8/16 CP
