Results visualization – how to do it?

■ Locally

- Download the data on the local PC (scp from JUSTUS to LOCAL station)
 - Visualization programs must be installed
 - Performance?
 - Workflow break

■ X-Forwarding

- Easy to use
- Responsiveness can be bad for interactive graphics
- Only recommended for non-interactive use

■ VNC (Virtual Network Computing)

- Needs a server started on the cluster
- Better performance than X-Forwarding

X-Forwarding

- Login with ssh option -X

- Without X-Forwarding: `ssh <UserID>@justus.uni-ulm.de`

- With X-Forwarding: `ssh -X <UserID>@justus.uni-ulm.de`

Now you can start graphical applications

X-Forwarding

- Login with ssh option -X

- Without X-Forwarding: `ssh <UserID>@justus.uni-ulm.de`

```
module load chem/molden
molden
```

- With X-Forwarding: `ssh -X <UserID>@justus.uni-ulm.de`

```
module load chem/molden
module load chem/molpro/2015.1.5
molden $TURBOMOLE_HOME/bwhpc-examples/methane.xyz
module load chem/molden
```

Remote Visualization with VNC

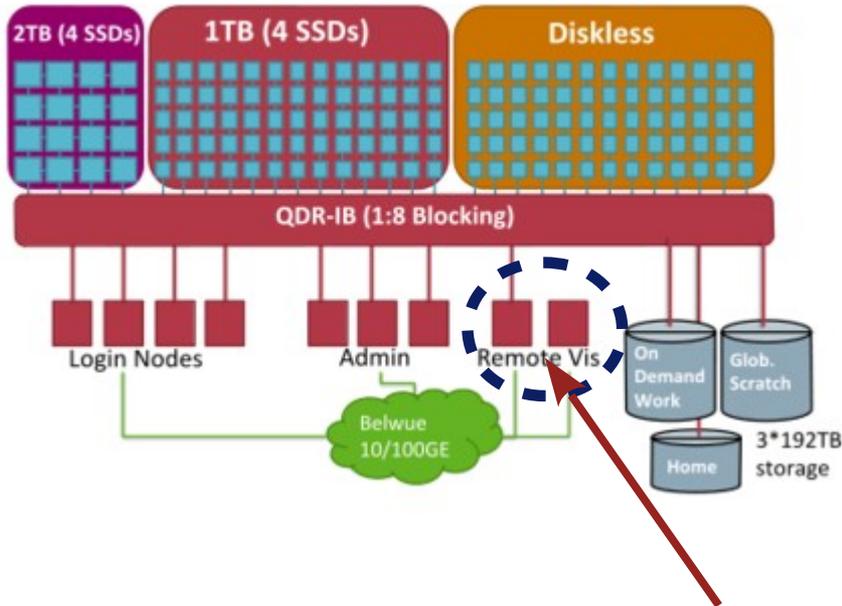

bw | HPC – C5

Remote Visualization with VNC

JUSTUS

2 nodes for the remote visualization

NVIDIA K6000

512 GB of RAM

4 TB of the local disk space.

`ssh <UserID>@justus-vis.uni-ulm.de`

Remote Visualization with VNC

HOW TO DO IT ON JUSTUS?

- login on vis node: `ssh <UserID>@justus-vis.uni-ulm.de`
- start vnc server: `module load vis/tigervnc`
`run_vncserver`
- connect to vnc session via an ssh tunnel:
follow the instructions given by run_vncserver
- Run vis applications within the VNC session
`vmd ...`
