

Ulmer Seminare

**Funktionalanalysis und
Evolutionsgleichungen**

Heft 20
2016/2017

Print: Kommunikations- und Informationszentrum der Universität Ulm
Total number of copies: 300
T_EXnical realisation: Manfred Sauter

The statue on the cover is situated in the city of Ulm. It honours Albert Einstein, who was born here on March 14, 1879. Unfortunately, our photograph does not allow us to fully appreciate the sensation of relativity, since it does not show the rocket beneath the Einstein-faced snail. On the other hand, the artist of the statue, Jürgen Goertz, succeeds in giving us an insight into Einstein's miraculous brain (backside of the cover).

Preface

Once more we present to you a new issue of Ulmer Seminare: Volume 20, the final issue of the series. The first issue of Ulmer Seminare appeared back in 1996 when the internet was still in its infancy. In 1996 MathSciNet came into existence, Google followed a few years later in 1998. Interestingly, the electronic preprint repository arXiv.org was already around in 1991 and has since grown into the indispensable resource it is today.

This issue shall be the final issue of the series and we want it to be a special one, of course. The previous issues of Ulmer Seminare were foremost a venue for the proceedings of the Analysis Seminar of the *Institute of Applied Analysis* at Ulm University, collecting contributions from colleagues as well as from the members of our institute. Naturally we once again have a number of such contributions.

Furthermore, however, we invited all of you to send us short contributions in the general realm of functional analysis, partial differential equations and evolution equations that very loosely fit into the two categories of ‘open problems’ and ‘three-line proofs’.

The organisers are grateful to all the authors for their wonderful and most valuable contributions. We also would like to acknowledge Ulm University for its financial support over all these years.

Finally, we hope you enjoy the cornucopia of mathematical offerings and that the Ulmer Seminare will be fondly remembered.

Wolfgang Arendt
Jochen Glück
Manfred Sauter
Rico Zacher

More about the activities of the Institute of Applied Analysis can be found at <http://www.uni-ulm.de/mawi/iaa/>.

Table of Contents

A. Three-line proofs

Wolfgang Arendt: <i>Liouville’s theorem</i>	3
Wolfgang Arendt and Ralph Chill: <i>Pettis’ theorem and very weakly measurable functions</i>	5
Benjamin Célariès and Isabelle Chalendar: <i>Three-lines proofs on semigroups of composition operators</i>	9
Ralph Chill: <i>Short proof of the Ingham–Karamata theorem</i>	15
A.F.M. ter Elst and Sylvie Monniaux: <i>Convergence of eigenvalues</i>	17
Stephan Fackler, Jochen Glück, and Manfred Sauter: <i>On continuously embedded Banach spaces</i>	19
Jochen Glück: <i>On dense subspaces of the intersection of two Banach spaces</i>	21
Gisele Ruiz Goldstein, Jerome A. Goldstein, Rosa Maria Mininni, and Silvia Romanelli: <i>A generalized Trotter product formula</i>	25
Markus Haase: <i>A short and elementary proof of “spectral radius equals norm” for selfadjoint operators</i>	29
Markus Haase: <i>Goldstine’s theorem without topology</i>	31
Markus Haase, Peer Christian Kunstmann, and Hendrik Vogt: <i>On the numerical range of generators of symmetric L_∞-contractive semigroups</i>	33
Moochan Barnabas Kim, John W. Neuberger, and Wolfgang P. Schleich: <i>A perfect memory makes the continuous Newton method look ahead</i> ..	41
Jan Prüss: <i>A three-lines proof of the vector-valued Jensen inequality</i>	45

Wolfgang M. Ruess: <i>Fréchet spaces with the Schur property</i>	47
Jürgen Voigt: <i>On Green's function</i>	51
 B. Open problems	
Wolfgang Arendt, Dominik Dier, and Stephan Fackler: <i>J. L. Lions' problem on maximal regularity</i>	57
Wolfgang Arendt, A.F.M. ter Elst, and James B. Kennedy: <i>Can one hear the shape of a drum? – 50 years later</i>	73
Guy Cohen and Michael Lin: <i>The numerical range of Ritt contractions</i>	77
Guillermo P. Curbera and Werner J. Ricker: <i>Multipliers for spaces of unconditional series in the Hardy spaces $H^p(\mathbb{D})$</i>	81
Stephan Fackler: <i>Regularity and maximal regularity</i>	85
Stephan Fackler: <i>The angle problem for the H^∞-calculus</i>	87
Jochen Glück: <i>Is the peripheral spectrum of positive operators cyclic?</i>	89
Batu Güneysu: <i>The BMS conjecture</i>	97
Antoine Henrot: <i>Two open problems in spectral theory</i>	101
Bernd Kawohl: <i>Two dimensions are easier</i>	107
Pedro J. Miana: <i>Fractional convolution product associated to Mittag-Leffler functions, an open problem</i>	113
Mustapha Mokhtar-Kharroubi: <i>Some questions on absorption semigroups on $L^1(\mu)$ spaces</i>	119

Delio Mugnolo: <i>Is essential self-adjointness of T^*T equivalent to essential self-adjointness of TT^*?</i>	125
Delio Mugnolo: <i>How to project onto convex functions?</i>	125
Rainer Nagel: <i>9 (AGFA-)Probleme: Version 2016</i>	127
Werner J. Ricker: <i>Commutativity of selfadjoint matrices</i>	129
Manfred Sauter: <i>How twisted can a Jordan curve be?</i>	133
Vincenzo Vespri: <i>Quasilinear evolution problems: Sharp estimates on the kernel estimates and Harnack estimates</i>	141

C. Research articles

Wolfgang Arendt and Marcel Kreuter: <i>Mapping theorems for Sobolev spaces of vector-valued functions</i>	151
Wolfgang Arendt, Stefan Kunkel, and Markus Kunze: <i>Diffusion with nonlocal Robin boundary conditions</i>	171
Anna Dall'Acqua and Klaus Deckelnick: <i>An obstacle problem for elastic graphs</i>	195
Dominik Dier: <i>Non-autonomous forms and invariance</i>	211
Stephan Fackler: <i>Non-autonomous maximal L^p-regularity under fractional Sobolev regularity in time</i>	225
El-Mennaoui Omar and Laasri Hafida: <i>On evolution equations governed by non-autonomous forms</i>	245
Paweł Keller and Iwona Wróbel: <i>A very fast, numerically stable, and accurate algorithm for inverting general tridiagonal matrices</i>	255

Hynek Kovařík and Delio Mugnolo:
Schrödinger operators on exterior domains with Robin boundary conditions: heat kernel estimates 263

Vincent Laurent:
An alternative proof of the Faber–Krahn inequality 281

Alexander Nerlich:
Asymptotic results for solutions of a weighted p -Laplacian evolution equation with Neumann boundary conditions 289

Manfred Sauter:
Uniqueness of the approximative trace 307

Frank Steiner:
Do black holes exist in a finite universe having the topology of a flat 3-torus? 331

Vicente Vergara and Rico Zacher:
Stability, instability, and blowup for time fractional and other non-local in time semilinear subdiffusion equations 353
