

Join the ULMA Economic Workshop

Replicate published research. Use AI agents beyond ordinary chat.
Collaborate internationally.

A research-oriented experience in empirical economics for students at universities applying to host the on-site training.

Three-Day On-Site Training delivered by Ulm lecturers, followed by collaboration with students from Ulm University.

What You Will Do

The ULMA-EW is connected to the Ulm master seminar Applied Data Science: Replication & Extension. Each team replicates one existing published empirical study: reproducing main results, documenting deviations, checking robustness, and building a transparent replication package. This is a meaningful contribution to the quality assurance of empirical economic research, not just a classroom exercise.

1 Prepare via Moodle

After selection, use Moodle materials from Ulm University to prepare for empirical research, reproducible workflows, and AI-agent-supported analysis.

2 Join the On-Site Training

Ulm lecturers deliver the Three-Day On-Site Training at your university between mid-September and October.

3 Support an Ulm Seminar Team

After the on-site training, collaborate with students from Ulm University using tools such as GitHub, Zoom, and Discord.

4 Present Replication Results

Teams document their workflow and present their findings in English, including robustness checks and possible extensions.

Who Should Apply?

- Master's students in economics, finance, data science, or related quantitative programs.
- Solid foundations in empirical methods and basic R or Python.
- Interest in international teamwork and AI-assisted empirical analysis.

What You Gain

- Real replication-study experience with industry-standard tools.
- Collaboration with students from Ulm University in international teams.
- Practice with AI agents for multi-step research workflows, not just chat prompts.

Interested?

Ask your department or program coordinator whether your university is applying. Universities nominate 4 to 6 students.
