The Module Field Ecology III: „Marine Biology“ is designed for Master students in Biology and “Biologie Lehramt” and provides teaching in marine biology, botany and ecology.

The module is scheduled for the first half of the summer teaching season 2018 between April 16 and May 18, 2018. During the first weeks, specific lectures will introduce into different aspects of marine biology especially methods and applied scientific work in marine ecosystems. Also, students will have time to prepare seminar talks to certain topics of marine biology.

The field part of the module in Croatia will start with an early-morning departure on Saturday, May 5, 2018. This practical course in marine biology will introduce the most common methods in sampling, species-determination and evaluation of different marine ecosystems and consists of experiments determining oxygen and CO₂ exchange of marine organisms. After returning to Ulm (late Saturday, May 12, 2018), the follow-up week will be used for sample analysis and evaluation of acquired data. After final exam, the whole module Field Ecology III: Marine Biology will be acknowledged by 9 ECTS.

If not already done, the potential participants shall participate in the lecture Marine Ökologie (Prof. Tomaschko, see separate announcement for the summer teaching season 2018). This will be considered in the selection process for the participation.

First preparatory meeting with selection of participants: Wednesday January 24, 2018, 12:00, room N24/206.

Interested students have to inscribe themselves in the registration list at the Studienkommission Biologie M 24 / 570. The module is designed for 7 participants that will be selected according to criteria at the registration list.
