Natacha Altamirano	<b>Classical channel gravity: Tests and theory</b>
Animesh Datta	<b>Quantum-enhanced multi-parameter estimation: Requirements, restrictions and tradeoffs</b>
Maaneli Derakhshani	<b>The Newtonian limit of stochastic gravity differs from the many-body stochastic Schroedinger-Newton equation</b>
Yurii Dumin	<b>Coherence and decoherence in the formation of the cosmic microwave background spectrum</b>
Stefan Forstner	<b>Is gravity quantum? A proposal for a cavity-optomechanical test</b>
Christine Guerlin	<b>New constraints on Lorentz symmetry with nucleons in a cold atom clock</b>
Navya Gupta	<b>Change of Von Neumann entropy during collapse of the wave function</b>
Alexandros Karagiorgos	<b>Quantum cosmology of a Bianchi III LRS with a pp wave solution</b>
Adrian Kent	<b>Testing the non-locality of the gravitational field</b>
Filip Kialka	<b>Long flight-time interferometers for massive molecules</b>
Bernadette Lessel	<b>A new approach to relational quantum dynamics</b>
Sina Leon Loriani Fard	<b>Atom interferometric methods in testing General Relativity over extended baselines</b>

## Posters

Andrea Mari	<b>Testing quantum superpositions above the Planck mass requires a minimum time</b>
Dimitris Moustos	<b>Non-Markovian time evolution of an accelerated qubit</b>
Leonhard Neuhaus	<b>Cooling a macroscopic mechanical oscillator close to its quantum ground state</b>
Maria Papageorgiou	<b>The gravity of quantum and the quantum of gravity</b>
Nikola Paunkovic	<b>The violation of the weak equivalence principle as a consequence of the gravity-matter entanglement</b>
Shreya Prasanna Kumar	<b>Experimentally feasible quantum optical tests of Planck-scale physics</b>
Garrelt Quandt-Wiese	<b>How semiclassical gravity can explain the collapse of wavefunction and the spooky action at a distance</b>
Sofia Qvarfort	<b>Gravimetry through non-linear optomechanics</b>
Dennis Rätzel	<b>Gravitational properties of light</b>
Sahar Sahebdivan	<b>Non-classical features of gravity in a double slit experiment</b>
Dennis Schlippert	<b>Very long baseline atom interferometry</b>
Fabienne Schneiter	<b>Frequency spectrum of an optical resonator in a weak gravitational field</b>

## Posters

Robert Scott	<b>The semiclassical Einstein equations: <i>When are they valid?</i></b>
Ilya Semerikov	<b>Ultrastable cryogenic silicon cavity with crystalline GaAs/ AlGaAs mirror coatings</b>
Antoine Tilloy	<b>Principle of least decoherence for Newtonian semi-classical gravity</b>
Marko Toroš	<b>Quantum mechanics beyond Galileo</b>
Marko Vojinovic	<b>Symmetry protected entanglement between gravity and matter</b>
Tobias Westphal	<b>A micromechanical proof-of-principle experiment for measuring the gravitational force of milligram masses</b>
