

## Post-Doc / technical assistant position to be filled immediately as maternity leave replacement

in the project A07 of the CRC 1149

### **“The role of myeloid-derived suppressor cells (MDSCs) in post-traumatic and post-septic immune responses”**

We are looking for a Post-Doc / technical assistant to work on the immunomodulatory functions of MDSCs in sepsis. The project elucidates in a murine sepsis model how MDSCs improve sepsis outcome by strengthening the innate and adaptive immune response and enable post-septic hosts to cope with opportunistic viral infections.

#### **Your profile**

- Experience in mouse experiments is absolutely necessary, completed FELASA B animal course is highly recommended
- Extensive experience with multi-color flow cytometry
- Strong interest and experience in cellular immunology
- Driver’s license Category B is advantageous (to shuttle between the lab and the animal facility)

We are looking forward to your application.
